PIEDMONT RAILROADERS

✶ MODULE SHOW PROTOCOL ✶

Adopted February 2005

1. Provide your undivided attention while running on mainline. Alert the engineers in front and behind of any distractions.

2. Communicate! Announce any moves you plan that may affect normal running.

3. Stop and wait clear of any repair or re-railing occurring on an adjacent track.

4. Restore all turnouts to normal position immediately and announce "mainline clear".

5. Immediately remove any equipment which derails or uncouples a second time.

6. Restrict train length to that of the average siding or staging track.

7. Maintain moderate running speed, comfortable for others on the same track.

8. Assure no one else is denied a fair share of running time.

9. Mainline sidings are to be kept open for operations. Park trains on stub sidings, or remove from layout.

10. Beverages, food, and unrelated items are not to be placed on layout.
