Cover

Summer, 1907, with a class F ten wheeler in a hurry, on a trestle near Bannister, MI. Note the arch bar trucks on the box car and, underneath the tender, the pole sometimes used for pushing cars. Although not legible, it appears that the locomotive has a name on its cab side.

Ann Arbor Railroad GP38s 7802 and 7802 and 7771, both ex Conrail/Penn Central units, cross the Huron River Bridge	
in October, 1992. The Ann Arbor received yhe locomotives in 1985 Don Maddock Photographer	

July 2017 Location: Ann Arbor

2015 Location: Ann Arbor

On the new Ann Arbor that runs between Toledo to Osmer, GP38 7802 crosses over the Huron River Bridge in October 1992 with a single car train heading for the small yard at Osmer and interchange with the Tuscola & Saginaw Bay Railroad. The locomotive was built for the Penn Central in October of 1969. It then went to Conrail before being bought by the Michigan Interstate Railway in March of 1985 and lettered Ann Arbor railroad. It continues to work on the Ann Arbor for Watco, repaint in a orange livery and renumberd WAMX 3879. -- Don Maddock Photographer

May 2018 Location: Milan

A pair of south bound Ann Arbor GP 38s lead a train across the Saline River near Milan on May 3, 1986. This portion of the old Ann Arbor, about 50 miles from Toledo to Osmer, was operated by the Michigan Interstate Railroad from 1977 until 1988, by the Ann Arbor Acquisition Corporation until 2013 when WATCO took the line.

January 2021 Location: Howell

It is January 6, 2016 and a trio of Great Lakes Central locomotives, GLC 396, 385 and 397, pass under the Isabel Street bridge in Howell on CSX tracks. With long strings of cars to interchange with CSX at the Ann Pere crossing, GLC must frequently pull the cars to the west side of Howell to clear the signals. The wooden bridge is closed to vehicular traffic but remains a popular spot for locals and photographers to view trains. Photographer, Mark Cowles

October 2021 Location: Elberta

In this photograph from the early 1980's, a freight train led by four Ann Arbor GP35s is crossing the causeway leaving the yard at Elberta. Approaching Junction Switch (hidden by the grove of trees in foreground) at Mile Pole 290.29, the train will cross 184.22 miles to reach Owosso and another 106.07 before it yards in Toledo. The Ann Arbot has already moved the cars 60 to 80 miles across the waters of Lake Michigan. Photographer unknown, from the Don Harrison "UpNorth Memories" Collection

March 1994 Location: Springfield, Ohio No date The Detroit, Toledo & Ironton Railroad took Ann Arbor cabooses south to serve their Ohio lines. We see AA 2836 in Spring, Ohio. Her fading flag symbolizes that she would return to AA tracks. July 1968 1996 Location: Owosso When delivered in late 1950, the Ann Arbor's two 1000hp ALCO RS-1s were very attratice units. By the mid-1960's. the Wabash style paint on most of the Ann Arbor locomtives had been nglected to the degress thaat the equipment looked rather sorry. Ann Arbor RS-1 #20 is a prime example in this Februaary 17, 1968 photo. A partial repaint had eliminated the narrow white stripe on the long hood, further contributing to the motley appearance of a once sharp engine. It would be repainted one more time in the blue, white and gray before donning DT&I orange in the early 1970's. November 1997 Location: Owosso 1979 When the Michigan Interstate took over operations of the Ann Arbor, its management worked hard to improve the image of the road and reverse the decay which had prevailed during most of the 1970's. Much of the Ann Arbor's equipment received a new image as well, and the of the roads remaining eleven steel cabooses would wear some variation of the "ferry in the the fog" paint scheme. AA 2835 is seen here at Owosso on November 3, 1979 wearing a fresh paint job that it received the previous month. January 17, 1968 January 1998 Location: Owosso The Wabash shops built 10 of these attractive streamlined cupola cabooses for the Ann Arbor to its standard design in early 1952. An order for 7 more cars from International Car in 1955. AA2837, built 2/1952, was from the first group, 2830-2839. It is shown here at Owosso on January 17, 1968 wearing the DT&I-style red paint scheme with yellow ends and compass herald. Cover 1999 *Location*: Unknown No date (Left) Orders are hooped up from the "iron man" at Milan during the Michigan Interstate era. (Right top) Ann Arbor RS-1 cab side detail. (Right bottom) A TSBY freight head by ex- AA GP35 # 390 battles the elements in northern Michigan. 1990 summer August 1999 Location: Milan Ann Arbor Railroad GP38 7802 and caboose 2839 lounge at Milan, Michigan on a sunny Sunday morning during the summer of 1990. November early 1950's 1999 *Location*: Durand While photographs of the Ann Arbor's steel cabooses are somewhat common, views showing the cars with pennant heralds are harder to find. Cars 2830 - 2839 were delivered in late 1951 to the road with red bodies, silver roof and freight car red platforms and trucks, just like their contemporaties on the Wabash. They wore white Ann Arbor letting as above, but lacked any type of herald. Sometime, probably in the mid or late 1950's, the freight car red end platforms and trucks were repainted caboose red, and the cars would have the small pennant herald applied to them. Some cars wore the outline verison, while others donned the solid pennant. Cabooses 2840 - 2846, built by International Car in 1955, may sported the pennant heralds at delivery. May 2002 *Location*: Elberta boat ling cira 1960 Ann Arbor RS-1 number 21, still with an idler car in tow, assists eastbound FT-2 in getting underway from Boat Landing during the mid-1960's. This is the sort of view fondly remembered by many Ann Arbor fans - a busy yard, ferries coming and going several times a day, and plenty of action to inspire railfans young and old. March 1991 May 2005 Location: Milan Ann Arbor #7771, a 2000 hp GP38 built 9/1969. Ex PC, then CR #7771. The train is the daily run on its return trip to Toledo on an early Saturdaymorning in March 1991, at Crowe Rd.near Milan. The spine car and small box car came from Fingerly Lumber in Ann Arbor, the high cube from Saline. The Ann Arbor's last caboose was used for the long backup move down the Saline branch. August 1979 October 2005 *Location*: Owosso Newly painted Michigan Interstate cabooses #2831 and #2838 at Owosso yard in August, 1979. Cars #2830-2839 were built by the Wabash for the Ann Arbor in 1952. Similar cars, #2840-2846 were built by International Car in 1955. No. 2831 is located in Traverse City about 1/2 mile east of the Dinner Train station, and is owned by the Railroad Historical Societ of Northwest Michigan. No. 2838 is owned by the Bluewateer. Michigan Chapter of the NRHS, and is located in the CSX roundhouse in Saginaw, MI.

Cadillac Coaling Tower and associated facilities, including a sand house, water tank and a pump house. Photo dated to the 1940's.

December

Caboose #11 built in 1887 or converted from a turn of the century boxcar. Thesee cars were replaced by the newer cars in 1952 and 1955 and went into MOW service. Note the different hat styles being worn, with the crew most likely wearing the caps and the officials wearing the bowlers. Other views of this car as #2811 were used as the 2/1991 and 4/1993 calendar pages.

January

No. 2825 was built in 1895. Note that the window placement is somewhat different on the two cars, with the windows on No. 2814 being placed slightly higher. These wood bodied cars has steel under frames and were 35' 3" and 35' 9" in length. Both cars were sold to Luria Bros. May 1, 1961.

was originally numbere 69 and subsequently 98 by the DT&I and would have been used for yard and interchange service. Seen here in the Owosso yards on February 19. 1977. Other photos show it lettered and in use by the Michigan Interstate as late as 1980.

April

cost of \$209.40. It was later renumbered Ann Arbor 2813. When converted to M of W service in November 1957, it received its current number. The caboose later went to the Cadillac & Lake City Railroad, then to the Leelanau Senic Railroad, and finally to Northern Scuba on M22 in Traverse City. Later photos shows show it it now abandoned in overgrowth.

Inside Cover

An unusual view of an Ann Arbor freight train departing Selma Yard in Cadillac, circa 1919. The train is crossing the diamond of the Cummer and Diggins narrow gauge logging railroad. -- Photographer unknown, from historic postcard from the Arden O. Runyan collection

Inside Cover

At some time in the distant past, a train is running along Elberta's Frankfork Avenue as it departs Booat Landing. The line eastward had stiff grades, and this day's tonnage demanded "double heading." The lead lead locomotive's headlight, number board, boiler piping, and air air reservoir location suggest that it is one of the the G (later I-4) class Consolidations aguired in 1908. The that can be discerned on the trailing locomotive hint that it, too, is a G class 2-8-0. Below: Possibly the same train has crossed the that would later become state highway M-22 and is winding its way toward Thompsonsille.

Boat coaling hopper car at Owosso, Michigan, in July, 1957. The car was built in 1927 and originally came with Ann Arbor reporting marks and the Wabash name on the side. There were six of these cars in two series, one with two cars, 4520 and 4521, and the other with four cars, 4522 though 4525. This car was repaint in 1954. Note the longitudinal hoppers on the on the bottom for unloading the coal into the vessels' bunkers. Information came from the Norfolk & Western Historical Society. -- Photographer unkown, Mark Cowles collection, courtesy of Bob's Photos

October 2003 Location: Howell No date We are looking at the Ann Arbor's depot and motor car shed in Howell. Michigan. December 29, 1994 November 2005 Location: Henderson, MI Switching the elevator at Henderson on the ex NYC branch 7 miles north of Owosso Jct., around 4 pm, 12/29/1994 GP 35 #389 is still in the original vellow and black TSBY colors as it picks up several loads of beans. May 15, 2007 Julv 2007 Location: Bates, MI GP 35s #393, City of Cadillac and #394, City of Clare switch the lumber yard at Bates, north of Traverse City, on May 15, 2007. Bates is located on the former Chicago & West Michigan / Pere Marguette / C&O line, now operated by TSBY between Grawn to the southwest and Williamsburg to the northeast. TSBY gains access to this line from the former PRR branch line to Traverse City from Walton Junction on the line north of Cadillac. 2007 Location: Howell 1890s October Northbound Baldwin built 2-8-0 #42 passes Howell elevator after passing under North Michigan Ave. bridge. The locomotive was built for the TAA&NM in Feb. 1893 with 50" drivers. It was repossessed by the N&W in 1894. The mill lasted until about 1910 and was across the tracks and sightly east of the exisiting depot. Note: the locomotive was repossessed by Bladwin then sold to N&W. The elevator site became site of Ann Arbor motor McKeen motor car house. 11/25/2006 August 2009 Location: Ashley A forty-two year old Tuscola and Saginaw Bay EMD GP35 switches a cut of grain hoppers at the grain elevator in Ashley, on November 25, 2006. The town of Ashley, named after the builder of the Ann Arbor Railroad, was the junction with the Grand Trunk Western. September 2009 Location: Owosso 1/29/1978 A major online industry for the Ann Arbor Railroadand its successors, Dundee Cement, owned by Holcim Ltd. It is the largest producer of cement in the U.S. This Chicago Freight Car Leasing Co. covered hopper was in Owosso on January 29, 1978. 2011 Location: San Diego, CA 1956 August Shown way off line in San Diego, CA in 1956, number 280 is one of 50 boxcars built by the Wabash RR in 1950 and assigned to the Ann Arbor in 1956. These cars were in service on the Ann Arbor until 1972. The cars, numbered 250 through 299, were 40' long, with improved Dreadnaught ends, diagonal panel roofs and 6' Youngtown doors. The paint scheme on the car is the one applied by the Wabash shops using the older outline pennant. The car was painted box car red, including ends and roof. The load appears to be bagged cement from California's Cotton Cement Co. Unkown April 2016 Location: Owosso Ten Wheeler No. 120 at Owosso, Michigan. This 1899 Baldwin locomotive was one of 3 Class F and later one of 2 Class H1 4-6-0s. It went through three numberings: 41, 100, and finally 120. It was equipped with 63 inch drivers and had a tractive effort of 12,500 pounds. No. 120 was scapped at Owosso in April of 1951. Note the wooden cab and lack of a builder's plate. -- Jay William Collection October 2019 Location: Traverse City Novemeber.2016 It is noon on an untypically warm November day in 2016, and a pair of Great Lakes Central GP35s rolls by the repurposed Traverse City depot with lumber loads for Amerhart Limited's building supplies warehouse in Williamsburg. The Ann Arbor purchased the locomotives in 1964, and they are now working for their fourth owner. Tailing unit GLC 393 wears a new, special livery commemorating the Great Lakes Central's ten years of operation. -- Kelly Countryman Photographer Subject: Depots 1983 Location: Azalia 1910 August Azalia Depot with tile factory in background about 1910. service has alsways been an impressive structure. In this scene, AA1614, the Ann Arbor Kaliroads during the years of passenger stops at Durand with westbound train 51 sometime during the 1940s. As of August 1996, the AARRT&HA now has a display room in this historic depot. April 1997 Location: Sherman Sherman, Michigan was a station and on the Ann Arbor and predecessors during the very early years. Later, it would become the Mesick depot, after the famation of that town. In this interesting view from around the turn of the century, a group of section hands pose with their tools for an unknown photographer at the Sherman depot. March 1950 1998 Location: Byron Byron, Michigan, located 88.93 miles from Toledo's Cherry Street depot, represented a typical small station stop on the Ann Arbor with its frame depot and nearby elevator. Passenger service had ceased a couple of years before when this early 1950's view was captured. Though suffering from much neglect, Byron is one of the few extant depots on the the Ann Arbor. October 1999 Location: Thompsonville 1960 At one time, Thompsonville claimed two depots, after the Ann Arbor Railroad moved its depot to Copemish, the road would share this Pere Marguette depot at Thompsonville with its owner, and it srved as a train order station for both AA and PM (later C&O) trains. The Ann Arbor terminated its passenger service in 1950, but short C&O passenger trains still at the depot in the early 1960's when this photograph was taken. Cover 1940 2000 Location: Howell Ann Arbor 2-8-2 # 2493 steams past the Howell depot during the late 1940's at the point o a westbound freight. No date January 2000 Location: Howell A serence winter view of the Ann Arbor's Howell depot and freight house. The brick depot was built in 1884 and is preserved today, housing a museum. The 22' x 48' freight house, constructed during the same year, has long since vanished. Beyond the freight house on the same spur, is a fuel depot, one of many such small on-line customers which once existed on the Annie. July 2001 Location: Clare July 17, 1949 Train 52, with ten-wheeler #153 at the point, calls at the AA/PM Union depot in Clare, Michigan on July 17, 1949. The interlocking tower and depot both sport gray paint with with and black trim. Passenger service would end a year later, and the view would change further in the early 1950's, when the tower's wood siding would be covered with "maintenance-free" asbestos. The tower would vanish completely be the late 1950's, replaced by an automatic interlocker and the familiar color light signals. March cira 1940 2002 Location: Ann Arbor Extra 2201 West headed by a Wabash USRA Mikado, picks up train orders from the operator at Ann Arbor on a late winter afternoonin the late 1940's. mid 1950's

A pair of FA-2s, led by No. 51 crosses the double tracks of GTW's Holly sub east of the Durant Union Station sometime during the mis 1950s. Items of note, the unique set of signals on the post to the left of the and stand pipe providing water to GTW's steam locomotives. The class D32 Alcos were built in 1950 and were part of the Ann Arbor's fleet of 14 of the 1600 hp cab units.

May 2011 *Location*: Whitmore Lake

July 1950

July 1950 and the last westbound Ann Arbor passenger train, pulled by Atlantic type 4-4-2 #1611, makes its last stop at the Whitmore Lake Station. A small number of people await the train, and there is even something for the baggage car.

July 2012 *Location:* Toledo Cherry Street station Novemeber 1903

Cherry Street Station, Toledo, OH, date unknown. No. 153, a class F3 4-6-0 built by Baldwin in November 1903 sits with its train for passengers. The locomotive is one of 12 Ten Wheelers on the the Annn Arbor's roster, and one of six of the F3 Class. This class weighed in at about 70 tons, had a boiler pressure of 170 psi. and cylinder dimenisons of 19" x 26". The locomotives were used by the Ann Arbor in both freight and passenger service. No. 153 was scrapped in December 1948.

October 2012 *Location:* Park Lake

Park Lake Station, at Milepost 213 (1905 listing) located halfway between Marion and McBain, in the northeast corner of Osceola County. The station appears to include a residence for the agent. Beyond the station building is a handcar shed. Alongside the tracks in the foreground are a couple of pieces of special trackwork. The photo is undated and the building and sidings are long gone.

December 2012 *Location:* Clare

A eastbound plow train passing the Clare depot. While the paint on the depot is deteriorating, the train order signal is still in place. Plow 4502, built by the Russell Snowplow Company of Ridgeway, PA, is a single track style plow in which the blade is pointed in the center and throws snow off to both sides of the track. The plow also has extendable wings enabling it to to enlarge the path and flangesr blaades to clear snow and ice from between the rails. The plow, built in November 1953, was acquired from the Wabash in the early 1950s to replace aging wooded plows. The Queen Ann style depot was built by the Pere Marquette and Ann Arbor Railroads in 1898 at a cost of \$6585. It included waiting rooms agent's offices with bay windows for each railroad. It is currently the subject of an active preservation group working to restore and maintain it.

April 2013 *Location:* Urania Station

Urania Station, located at milepost 36.53. Urania was just a location on the railroad, not a town or community. Thomas Richards words worked to bring the railroad to Milan and was rewarded with the chance to name a station. He took the opportunity to name it after his late wife. The station was located on Willis Road, north of Milan, and is the site site of a 95 car passing siding. At one time there was also a spur for coal, serving a state hospital. The spur was removed in 1969. -- Photographer unknown collection of Mark A. Cowles from Brian Bluekamp collections.

AA 51A, one of the Ann Arbor's 14 ALCO FA-2s, rests at the Toledo engine house on May 26, 1961. The Ann Arbor numbered these locomotives in pairs, as in 51 an 51A, and initially considered each pair a single 3200-horsepower locomotive. This was delivered to the railroad in December of 1950 and with its sisters, replaced steam power on the railroad. It was turn over to the Wabash Railroad in of 1964 and subsequently traded in to EMD the follow month. Photographer: Lois A. Marre

January 2023 *Location:* Toledo, Ohio

In Toledo on January 16, 1962, several of of the Ann Arbor's 14 ALCO FA-2s await the call to duty. AA 53 was built in December 1950 and served the Ann Arbor until traded in on GP35s in March 1964. Alco-GE built 334 of the 1600 horsepower FA-2s at its Schenectady, new York, plant between 1950 and and 1956.

July 2023 *Location:* Durand

6/11/1964

1/16/1962

On June 11, 1964, as the end of an era nears, a train of mixed freight departs Durand westbound behind a pair of FA-2s. In 1950, the Ann Arbor Purchased seven pairs of the 1600 horsepower ALCOs, classifying each pair as a D32 locomotive. The FA-2s worked for the ANN Arbor until 1964, when ten EMD GP35s were ordered as replacements. By the date of this photo, most of the Fas were gone, sent to EMD for credit or swapped with the Wabash for worn out trade-in fodder. AA 54, on the point of this train, would be gone by the end of the month - the last FA to leave the Ann Arbor.

Detroit Toledo and Ironton GP-35 352 switching at Alma, MI, April 8, 1969. The 352 was built in 1964 and was one of 8 GP-35s on the DT&I's roster. The DT&I controlled the Ann Arbor, for the second time, from 1963 until 1976, and locomotives from both roads were used on the other's trains. In addition to any local industries, the Ann Arbor interchanged traffic with the Cheasapeake and Ohio's Elmdale to Saginaw line, which it crossed here at grade.

On Saturday, August 5, 1978, Ann Arbor 394 leads eastbound train FT2 across the River Rasin, near Dundee, on a through Pratt truss bridge. The 2500 hp GP 35 locomotive was built by EMD in June 1964. The original EMD 567 prime mover was rebuilt with 645 power assemblies by the DT&I RR in 1967.

September 2011 *Location:* Hamburg

Forty-five years old and freshly repainted, GP 35 391 is in trailing mode with a Hamburg Railroad Days excursion train being pulled by NKP 765, on September 12, 2009. EMD built 1333 of these 2500 hp GP 35s and #391 is one one of 10 ordered by the Detroit Toledo & Ironton RR for the Ann Arbor, which it controlled at that time. Great Lakes Central began operations in March 2006 after purchasing the Tuscola and Saginaw Bay Railway. With 424 miles miles of track, it is the largest regional railroad in Michigan. It operates from Osmer, north of Ann Arbor, to Yuma, from Cadillac to Petoskey and Traverse City, Ashley to Middletown and from Owossso to St. Charles, all in Michigan.

February 2012 *Location:* Yuma

For over 46 years, from 1964 through 2010, EMD GP35s were the mainstay of the Ann Arbor, Michigan Interstate, Tuscola and Saginaw Bay and Great Lakes Central Railroad operations. The 2500 hp units, riding on 62 year old trucks from retired Alcos, have been constantly upgraded to provide service to their ownersw, and only recently have faced replacement by new acquired GP38-2s. They are seen here eastbound on train FT2 near Yuma, MI.

December 2012 *Location:* Clare

A eastbound plow train passing the Clare depot. While the paint on the depot is deteriorating, the train order signal is still in place. Plow 4502, built by the Russell Snowplow Company of Ridgeway, PA, is a single track style plow in which the blade is pointed in the center and throws snow off to both sides of the track. The plow also has extendable wings enabling it to to enlarge the path and flangesr blaades to clear snow and ice from between the rails. The plow, built in November 1953, was acquired from the Wabash in the early 1950s to replace aging wooded plows. The Queen Ann style depot was built by the Pere Marquette and Ann Arbor Railroads in 1898 at a cost of \$6585. It included waiting rooms agent's offices with bay windows for each railroad. It is currently the subject of an active preservation group working to restore and maintain it.

This 660 hp unit was built in 1952 and sold to the Ann Arbor in Dec. 1968 after the M&LS shutdown. After being sold to an individual by the State of Michigan, it was donated to the National Railroad Musuemm in Green Bay, WI, where it has been repainted into Green Bay & Western colors. September 2008 Location: Elberta 1958 An the engine service area in Elberta in 1958 is #56, a class D32, 1600 hp Alco built 12/9/1950. In the background are a Class D6, 660hp Alco switcher, a section car and one of the cabooses built for the Ann Arbor by the Wabash RR at its Decatur, IL shops. April 1975 April 2009 Location: Owosso Lookingfresh from the paint shop, Alco S3 #10, rests in the Owosso yards in April 1975. Originally Manistique and Lake Superior #1, the 660 hp locomotive was built in Oct. 1952, and became AA #10 in Dec. 1968. After taking over the assets of the Ann Ar July 1981 May 2012 Location: Elberta It is July 1981 and the 660 hp Alco S-3 No. 7 is seen at Elberta working cars on or off of the Viking. The unit, one of five 3-3s on the roster, was purchased in November 1950. The locomotive was leased by the State of Michigan to the Kent, Barry and Eaton Connecting Railroad, which returned it with engine problems. It was not repaired and was sold for scrap. February 2016 Location: Elberta Unknown No. 6 was one of four 660 hp Alco S-3s on the Ann Arbor roster, all built in 1950. It is shown here in Elberta, Micigan, with an idler car used for switching the car ferries. This unit was later leased by the State of Michigan to the Kent -Barry - Eaton Connecting Railroad and repainted into their colors. It was returned early in 1980 with a burned out engine and was sent to Alma Iron & Metal for scrapping. Of the 292 S-3s built, only three are known to be preserved, one being Manistique & Lake Superior No. 1, later Ann Arbor No. 10. December 2018 Location: Elberta February 18, 1977 It is February 18, 1977, and road units, GP35s No. 386, 387 and 392 rest in company with and Alco S3 switch near the sand tower in Elberta vard. Located between mileposts 290 - 291.9, along the south of shore of Lake betsie and across the lake from Frankfort, the yard served the carferry dock and local industries. Next stop for west bounds, the ports of Kewaunee, mp 352, 60 mi., Manitowoc, mp 371., 79 mi. or Menominee, mp 372, 79 mi. Mav 2020 Location: Boat Landing October 22, 1977 Ann Arbor 7, an Alco S-3, switch out the car ferry 'Viking' on October 22, 1977. The 660 horsepower, one of the railroad's five end cad cab switchers, was built in 1950. After the the State of Michigan took over the Ann Arbor, the unit was was sold to the Kent, Barry, Eaton Connecting Railway. After suffering engine problems on that line, it was returned and then sold for scrap. Subject: Diesel Shops October 1986 Location: Owosso 1977 ALCO RS1 #21 in the locomotive shop at Owosso, MI on Oct 15, 1977. Notice that there are three levels at which the locomotive can be worked on at once: the pit between the rails, the floor and the raised platform on either side. August 1994 Location: Owosso 1972 Ann Arbor GP 35 387 has coupled on to the Bucyrus 100 ton steam wrecker behind the Owosso diesel shop. As of this 1972 photo the wrecker still saw rare service. 1974 December 1996 Location: Owosso A crisp winter night in 1974 finds Ann Arbor GP35 #390 resting from its duties at the Owosso, Michigan terminal.

Tuscola and Saginaw Bay GP35 # 385 and RS-2 #466 at the shops in Owosso, Michigan. The 2500 hp #385 was built by EMD in March 1964, one of the 10 GP35s bought by the Ann Arbor. The 1500 hp #466, built in October 1946 for the Detroit and Mackinac Railroad, was the first of 378 RS-2s built by Alco. It has since been been sold to the Michigan Southern Railroad. This portion of the Owosso shops was built by the Ann Arbor Railroad in 1952. --

Diagram Class H, engines 180- 182. Note this drawing appears to from the set of original drawing to make the diagram books.

Immediately behind 390 is a boxcar - somewhat of a rarity in GLC trains, Photographer: Dennis Schmidt

Toledo, Ann Arbor and North Michigan Railway Hay Car No. 921, built by the Peninsular Car Company of Detroit in 1887. It was the first of a series of 25 such cars numbered 921 though 945. These cars were 34-feet long, 8-feet 6inches wide, and 7-feet 9-inches high with a capacity of 20-tons. They were later reclassified as furniture and Hay cars: only two remained in service by 1914. The Peninsular Car Company was founded in Detroit in 1885, merged with several other companies in 1892 to become the Michigan-Peninsular Car Company and in 1899 merged with others to become the American Car & Foundry Company. Photographer unknown, from the Keweenaw Railway Historical

Mav

May Tusola & Saginaw GP35s 389 and 385 are at Clare in October of 1984. These twin EMDs were the first to have their

Ann Arbor orange colors replaced by a full TSBY livery and the only ones to receive the black and yellow scheme. For reasons not discovered, this pair never seemed to perform well together and were seldom operated in the same consist.

Inside Cover 2019 Location: Selma Yard, Cadillac circa 1919 An unusual view of an Ann Arbor freight train departing Selma Yard in Cadillac, circa 1919. The train is crossing the diamond of the Cummer and Diggins narrow gauge logging railroad. -- Photographer unknown, from historic postcard from the Arden O. Runyan collection Subject: Freight Car - Hopper 2023 Location: Clare 10-1984 2019 Location: Zanesville, Ohio Unknown

The sand house and adjacent fueling rack at Boat Landing (Elberta) were a popular location to photograph the Ann Arbor's diesel motive power. In this view, GP35 number 390 hides behind the sand house, while its mate restin the background. The structure was orginally constructed to service the road's ALCO FA-2's and remained in use until the facilities were abandoned when service ended on the road's north end in 1982. It was demolished in 1990 when the vard and most of its structures were razed.

The line drawing below is from a stenciling diagram dated August 23, 1926, which shows the application of Wabash style lettering to these cars. In early 1925, shortly after the Wabash took over the Ann Arbor, 95 of these cars were still

in use. Seventeen were listed in revenue service in 1932, though all were off the roster the following year.

Tusola & Saginaw GP35s 389 and 385 are at Clare in October of 1984. These twin EMDs were the first to have their Ann Arbor orange colors replaced by a full TSBY livery and the only ones to receive the black and vellow scheme. For reasons not discovered, this pair never seemed to perform well together and were seldom operated in the same consist.

Ann Arbor 2552, a USRA Light Santa Fe 2-10-2, pauses in Wabash Indiana on September 16, 1942. In late 1917, the United States faced a critical shortage of transportation resources as it prepared to enter World War 1. Unprecedented tonnages of war materials needed moved to the seaports, and the expanding armed forces demannded trasport for large numbers of men. To address this exigency, the railroads were placed under temporary federal control, and the United States Railroad Administration (USRA) was created to operate the county's railroad system. Among the USRA's many undertakings were the ddesign of a series of stand locomotives and the distribution of new locomotives to railroads needing additional motive power. In1919, the USRA assigned four of its new Baldwin "Light Santa Fe" 2-10-2 locomotives to the Ann Arbor. Weighing over half a million pounds with tender and producing 68,375 pounds of tractive effort, these were to be the largest, heaviest, most powerful team engines the railroad would ever own. Originally numbered 190-193 and placed in Class L, they were eventually renumbered 2550 to 2553 and reclassified L2. The following year, the Ann Arbor purchased the Ls on a 15 year, \$223,900 equipment trust. This was apparently a good price for four new locomotives, as the 2-10-2s were really too big and heavy for the Ann Arbor. To prevent damage to the track, they were limited to 30 miles per hour (freight trains with smaller locomotives were permitted 45mph, passenger trains 55mph) and were restricted from many side tracks. Operation west of Cadillac posed problems since turning an 86 1/2 locomotive on Elberta's 76 foot turntable was a challenge. The Ls were often assigned secondary duties, like pushing trains up the hill from Ferry Yard to Osmer, and spent significant time on the Wabash. They worked for the Ann Arbor until 1942, when management declared them "of no further use to the company" and sold them to the Kansas City Southern. They continued in service there until 1951. In 2016, the trailing cheme celebrating the Great Lakes Central's tenth anniversary Unknown In age demanded "double heading." The lead lead locomotive's ir reservoir location suggest that it is one of the the G (later I-4) class the discerned on the trailing locomotive hint that it, too, is a G class 2-8- he that would later become state highway M-22 and is winding its way January 6, 2019 of Ann Arbor EMDs brings a long train of auto racks into Milan. On the of the Ann Arbor's ex-Union Pacific, ne-Missouri-Kanas-Texas GP39-2s any Watco's corporate livery. The Ann Arbor brings loads of Jeeps ach week, but these are empties going to Urania for short term storage.

July 31, 2015 October 2020 Location: Marion On July 31, 2015, the morning Great Lakes Central Clare turn rolls through Marion eastbound behind a pair of the railroad's GP38-2s. The train is heavilyy laden with fracking sand from Fairmount Santrol's quarry at Yuma. The sand plant has since closed, reopened, and closed again in response to fluctuations in the demand for Yuma's material. February 5, 2017 December 2020 Location: Howell GLC 393, one of the Ann Arbor's original GP35s, displys the Great Lake Central's special paint scheme celbrating the railroad's 10th birthday. On February 5, 2017, the locomotive leads a long train though the west side of Howell on CSX tracks while switching the AnnPere interchange. Julv 2023 Location: Durand 6/11/1964 On June 11, 1964, as the end of an era nears, a train of mixed freight departs Durand westbound behind a pair of FA-2s. In 1950, the Ann Arbor Purchased seven pairs of the 1600 horsepower ALCOs, classifying each pair as a D32 locomotive. The FA-2s worked for the ANN Arbor until 1964, when ten EMD GP35s were ordered as replacements. By the date of this photo, most of the Fas were gone, sent to EMD for credit or swapped with the Wabash for worn out trade-in fodder. AA 54, on the point of this train, would be gone by the end of the month - the last FA to leave the Ann Arbor. 2014 October 2023 Location: Durand On a fall afternoon in 2014, a short Great Lakes Central train with a pair of GP38-2s on the head end is departing Durand northbound for Owosso. The train is about to pass under the Lansing Road Bidge on Huron & Eastern Railway tracks originally part of the Grand Trunk Western's Grand Rapids Subdivision. The Ann Arbor's tracks between Durand and Owosso were acquired by the GTW and scrapped after the Ann Arbor's bankruptcy. 2/26/2020 December 2023 Location: Osmer On the 2t of February 2020, the Great Lakes Central's south turn arrives at Osmer during a mid-winter snow squall. The GLC's pair of ex-Penn Central GP38-2s have created the half-percent grade apprroaching Joy Road and ar eassing up to the north siding switch at restricted speed. June 1989 Location: Pittsfield Junction 1970 Steam in action on the Ann Arbor in the 1970's was in the form of this venerable 100-ton Bucyrus crane built in 1912. Here it is at work on a derailment at Pittsfield Junction, just south of Ann Arbor. 1940 January 1992 Location: Unknown The Ann Arbor owned two wooden Russell Snow Plows. Here, AA 4500 is being shoved by a 2400-series mikado on a cold and snowy day in the 1940's. April 1995 Location: Unknown 1900 Maintenance of Way Equipment Cover 1997 Location: Elberta 1973 Jim Sinclair's camera found Ann Arbor ALCO S-3 number 6 and crew waiting for their next switching move at Boat Landing on July 17th, 1973. In the distance, a plume of smoke drifts from the stack of the car ferry S. S. City of Milwaukee, on loan from the Grand Trunk. Countless passenger and railfans witnessed similar sights at the Ann Arbor's Marine terminal during the diesel era. April 1997 Location: Sherman Sherman, Michigan was a station and on the Ann Arbor and predecessors during the very early years. Later, it would become the Mesick depot, after the famation of that town. In this interesting view from around the turn of the century, a group of section hands pose with their tools for an unknown photographer at the Sherman depot. 1938 October 1997 Location: Toledo one of the more interesting and elusive pieces of equipment in maintenace of way service on the Ann Arbor was ditccher 3723, see here working in Toledo during 1938. Formerly numbered S-40, this machine was built in 1913 by the American Ditcher Company and sold to the Wabash in 1934. 1997 Location: Elberta December July 17, 1973 In the early 1950's, the Ann Arbor went shopping for a replacement for its aging wood snowplows. The result was steel Russell snowplw 4502 which still has its Wabash-era pennant herald in this July 17, 1973 photo. The plow was a common resident at Boat Landing during the off season, but as winter set in, it would be called into action battling the heavy Michigan snows. Overland Models has previously imported brass models of this "standard" single track Russell, while Walthers produces HO scale models and recently announced an N scale verison. The above paint scheme is caboose red (including roof) with yellow grabs, white lettering, silver horn and black headlight. Cover 1930s 1998 Location: Elberta Ann Arbor hand derrick 3179 is surround by other maintenance of way equipment in this steam era photograph. Painting standaards adopted for the road's equipment after coming under the control of the Wabash specified the complete name of the parent road with A. A. stenciled nearby in smaller letters. New stenciling diagrams from the early 1930's no longer called for inclusion of the Wabah stenciil, restoring to prominence the Ann Arbor name. The extent to which actual practice followed the diagrams is, at best a guess. Regarding of what the official diagrams would seem to indicate, the characteristic variation associated with repaints, along with the length of time that some equipment might ao between painting, combined to prduce a cornucopia of lettering schemes which can be seen in photographs of the late 1930's and 1940's. September 2000 Location: Unknown post 1957 Ann Arbor wood caboose 4615, painted yellow with black lettering, and assigned to Maintenance of Way service, had formerly been AA 2820. After the arrival of the modern steeel cabooses in 1952 and 1955, the road's ancient wood hacks became surplus. Several of the cars were converted to M of W service and 4615 is one of seven converted and reassigned during 1957. Coupled next to the caboose is AA X4621, on of fifty former Wabash steel rebuild box cars, sold to the Ann Arbor in 1954 and part of AA series 1100-1149. After retirement from revenue service, many of the 1100-series cars were painted black and assigned to Company Service. December 2003 Location: Boon July 1979 Ann Arbor train FT2 meets Sperry Railcar at Boon siding, in July, 1979. This meet has drawn much attention with a couple of company vehicles as well as a couple of railfans. May 2004 Location: Unknown 7/21/57 Maintenance of Way Equipment

2-10-2 #2552 pauses for water at Chilson, Michigan in 1937. These four L-class locomotives built by Baldwin were the largest steam power used by the Ann Arbor. In 1942, they were sold to the Kansas City Southern where they ran for ten more years.

July

2000 Location: Owosso

In this early view, Ann Arbor 2-10-2 number 191 rests next to the roundhouse at Owosso. This engine would become AA2551 in the road's renumbering of the early 1930's. The United States Railway Administration assigned four of these lumbering, Baldwin built, USRA light "Sanfe Fe's" to the Annie in 1919, though they seem to have been ill-suited for use on the road, and were confined mostly to operation on the Ann Arbor's south end. Too long to be turned on a 75' turntable such as at Elberta and Owosso, Toledo was the only facility on the Ann Arbor with turntable long enough to accommodate them. All four were sold to the Kansas City Southern in September 1942, and AA 191/2551 became KCS engine 221, serving its new owner until scrapping in November of 1951.

Ann Arbor 2552, a USRA Light Santa Fe 2-10-2, pauses in Wabash Indiana on September 16, 1942. In late 1917, the United States faced a critical shortage of transportation resources as it prepared to enter World War 1. Unprecedented tonnages of war materials needed moved to the seaports, and the expanding armed forces demannded trasport for large numbers of men. To address this exigency, the railroads were placed under temporary federal control, and the United States Railroad Administration (USRA) was created to operate the county's railroad system. Among the USRA's many undertakings were the ddesign of a series of stand locomotives and the distribution of new locomotives to railroads needing additional motive power. In1919, the USRA assigned four of its new Baldwin "Light Santa Fe" 2-10-2 locomotives to the Ann Arbor. Weighing over half a million pounds with tender and producing 68,375 pounds of tractive effort, these were to be the largest, heaviest, most powerful team engines the railroad would ever own. Originally numbered 190-193 and placed in Class L, they were eventually renumbered 2550 to 2553 and reclassified L2. The following year, the Ann Arbor purchased the Ls on a 15 year, \$223,900 equipment trust. This was apparently a good price for four new locomotives, as the 2-10-2s were really too big and heavy for the Ann Arbor. To prevent damage to the track, they were limited to 30 miles per hour (freight trains with smaller locomotives were permitted 45mph, passenger trains 55mph) and were restricted from many side tracks. Operation west of Cadillac posed problems since turning an 86 1/2 locomotive on Elberta's 76 foot turntable was a challenge. The Ls were often assigned secondary duties, like pushing trains up the hill from Ferry Yard to Osmer, and spent significant time on the Wabash. They worked for the Ann Arbor until 1942, when management declared them "of no further use to the company" and sold them to the Kansas City Southern. They continued in service there until 1951. Inside Cover 2021 *Location*: Wabash Indiana

Ann Arbor 2552, a USRA Light Santa Fe 2-10-2, pauses in Wabash Indiana on September 16, 1942. In late 1917, the United States faced a critical shortage of transportation resources as it prepared to enter World War 1. Unprecedented tonnages of war materials needed moved to the seaports, and the expanding armed forces demannded trasport for large numbers of men. To address this exigency, the railroads were placed under temporary federal control, and the United States Railroad Administration (USRA) was created to operate the county's railroad system. Among the USRA's many undertakings were the ddesign of a series of stand locomotives and the distribution of new locomotives to railroads needing additional motive power. In1919, the USRA assigned four of its new Baldwin "Light Santa Fe" 2-10-2 locomotives to the Ann Arbor. Weighing over half a million pounds with tender and producing 68,375 pounds of tractive effort, these were to be the largest, heaviest, most powerful team engines the railroad would ever own. Originally numbered 190-193 and placed in Class L, they were eventually renumbered 2550 to 2553 and reclassified L2. The following year, the Ann Arbor purchased the Ls on a 15 year, \$223,900 equipment trust. This was apparently a good price for four new locomotives, as the 2-10-2s were really too big and heavy for the Ann Arbor. To prevent damage to the track, they were limited to 30 miles per hour (freight trains with smaller locomotives were permitted 45mph, passenger trains 55mph) and were restricted from many side tracks. Operation west of Cadillac posed problems since turning an 86 1/2 locomotive on Elberta's 76 foot turntable was a challenge. The Ls were often assigned secondary duties, like pushing trains up the hill from Ferry Yard to Osmer, and spent significant time on the Wabash. They worked for the Ann Arbor until 1942, when management declared them "of no further use to the company" and sold them to the Kansas City Southern. They continued in service there until 1951.
