

The AR Class Wagon – ‘R’ for Refrigerated

AR wagons had insulated cladding & double doors.

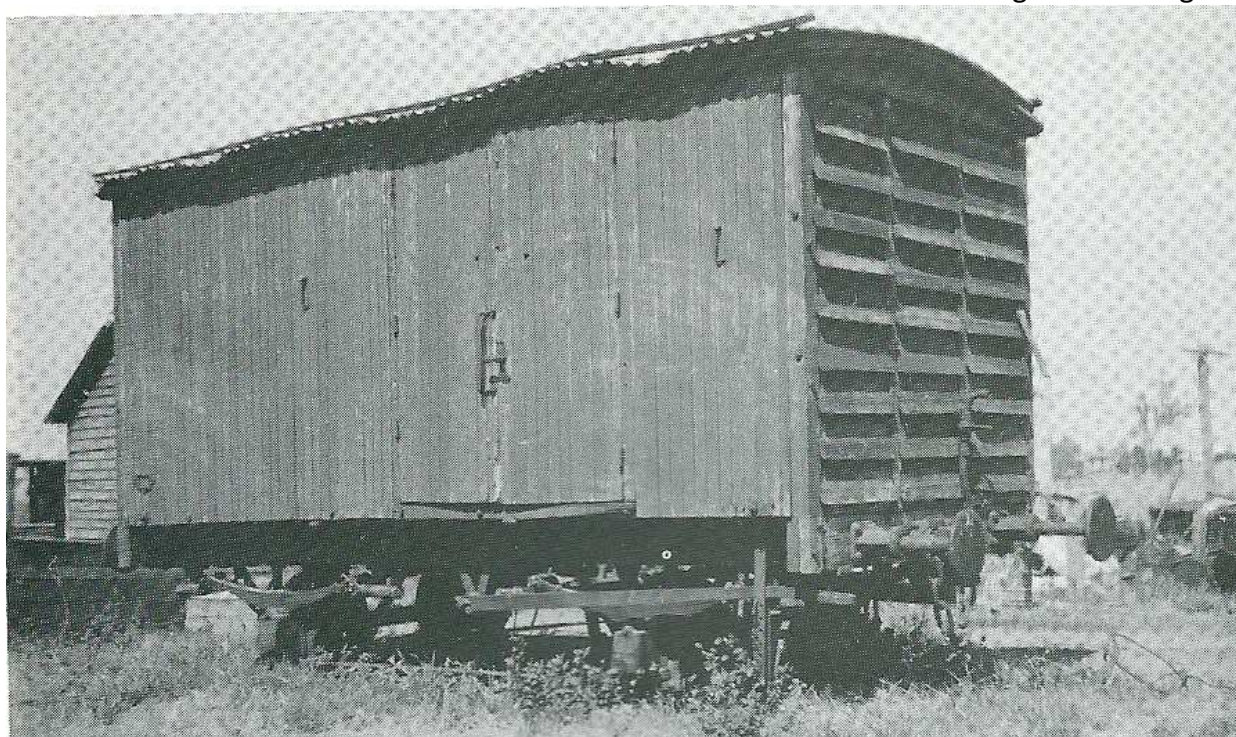

A plywood box was covered in 1.6mm Balsa.
The Balsa is then scribed to resemble vertical boards.

A typical Q.R. drawing used to make the model.

Many variants existed, here a Q.R. ABG Class
Wagon has a single door.

This Q.R. wagon was an A class, thought to be a rebuild of the 3442/3443 series (Q.R. drg 1088)
It has Offset double doors, so may have been an ARO Wagon with Louvered end walls.
The completed model uses Hook and Chain couplings as do all BTR 4 wheel Wagons.
