

The QBV Class – Quarry Brake Van.

The Quarry trains that operate on the BTR did not really need a Brake Van come Guards Van. The brakeman, Mr. Halt, just rode on the last skip from where he could operate the brakes as needed. However, to celebrate his 30 years service anniversary, the workshop apprentices resurrected and rebuilt one of the disused quarry skips to make this Brake Van.

Mr. Halt was suitably impressed and enjoys his new accommodation in transit.

Quarry Brake Van is scratch built of wood, the wheels are Bachmann brand.

It has room for a few passengers & parcels.

A rear wall "Look-Out" allows train monitoring.

This project took about 18 hours to complete.

It is tiny and yet well suited to the task.

The QBV Class – Quarry Brake Van.

Quarry trains comprise; Locomotives, Skips, Flat wagons and the Brake Van.

Modified 'Stainz' 0-4-0 with Skips.

Krauss 'Robin' 0-4-0 with Quarry train.
