

Geof's Red Fred RM55

Modelled from plans and photos in Styrene, can pull 3 moderate size wagons, just like the real thing.

On board battery, R/C and sound with horn too.

The speaker box on left, underside of battery box in centre, gearbox / motor on right. Battery charge terminals accept alligator clips when charging, on/off switch top right.

Geof's Red Fred RM55

The speed/ direction & horn circuit was built by Greg Hunter, it fits up in roof cavity.

The wires inside have since been tidied up and placed under the floor.

Geof's Red Fred RM55

Prior to detailing the interior, the wires were visible at window sill level.

The interior is detailed with the seats, driver and several passengers.

The interior of the real Rail Motor
