

SOLUTIONARY RAIL

Electrified Railroad as a Win for America

When so many issues divide, Solutionary Rail unites Americans in common cause for a clean energy future.

Friday, May 3, 5:30-7:00 pm (doors open at 5 pm)

UNO Barbara Weitz Community Engagement Center - Room 201-205

6400 University Drive South, Omaha 68182 (free parking in Lot E)

Or Take O-Metro Bus Route 2 to 62nd & Dodge St. Stop

Could railroads, the oldest form of mechanized mass transportation, be the key to unlocking solutions to some of the greatest challenges of the 21st century? Unique among modes of long-haul transport, rail can be electrified. So, why not power trains with renewable energy? Might a clean, modernized, higher-speed rail network draw freight and passengers off the highways and back onto the tracks? Could electrifying the railroads actually open new transmission corridors and increase the supply and reliability of electricity from wind and solar? If the rest of the world is already electrifying their railroads, why isn't the US? Video, info, and book purchase at www.solutionaryrail.org. Please join us on May 3 for this presentation and discussion!
