## INDEX OF S&DJR SIGNAL INSTRUCTIONS

### Notes

This is an Index of all S&DJR Signal Instructions known to the author. Most of the Signal Instructions listed in this Index are held in the Archives of the Somerset & Dorset Railway Trust (S&DRT), which are now in the custody of the Somerset Heritage Centre (catalogued under their reference A/CWO/12/1/5). A hash symbol '#' against an entry denotes a Signal Instruction held in a private collection. A dollar symbol '\$' against an entry denotes a Signal Instruction for which the details have been provided by another source, but no official copy has been sighted.

The Index is in two parts:- the first part lists the Signal Instructions in numerical order, the second part lists the Signal Instructions in alphabetical order of the locations to which they refer. Where a Signal Instruction relates to more than one location and/or date then the Index contains separate entries for each location and/or date as appropriate.

### Key to Index entries:-

<b>No</b>	Identification number of the Signal Instruction.
<b>Issue Date</b>	The date when the Signal Instruction was issued (if known).
<b>Change Date</b>	The date quoted in the Signal Instruction when it was intended that the work would be done/completed and the alteration brought into use. (In a few cases a period of two or more days is quoted.)
<b>Location</b>	The place at which the work would be done, identified usually by the name of the relevant signal-box or ground-frame.
<b>Subject</b>	A brief description of the work to be done. (Details in <i>italics</i> are unconfirmed. The abbreviation D&C refers to Disc-and-Crossbar signals.)
